MIRO – Interface Technology

MIRO – INTERFACE TECHNOLOGY

MARKET REQUIREMENT

The intelligent modularity saves space and provides easy, flexible replaceability.

Be it in the manufacturing industry, building automation or process technology, the signals that are transferred between process peripherals and control systems must always be transmitted reliably and potential-free. These control concepts can be achieved in extremely confined spaces using Murrelektronik relay and opto-coupler modules.

These products ensure that your costs are reduced by increasing interference immunity and therefore improving the availability of machinery and system components. Slimline housing designs require less space and therefore reduce the size of your control cabinet. The intelligent modularity of MIRO relays and opto-couplers using plug-on modules makes the replacement of switching elements both easy and low cost.

The MIRO product range has been complemented by MIRO Safe safety relays. MIRO Safe helps reduce downtime and optimize outages since MIRO Safe relays are intentionally applied to protect both workers and machines.

SWITCHING AND CONTROLLING IN THE CONTROL CABINET – ALL FROM A SINGLE SOURCE

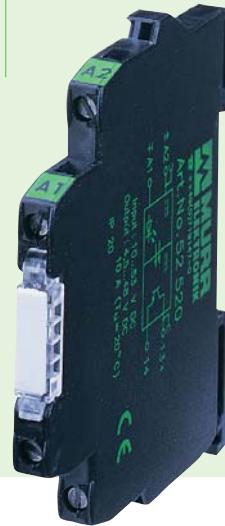

RELAYS

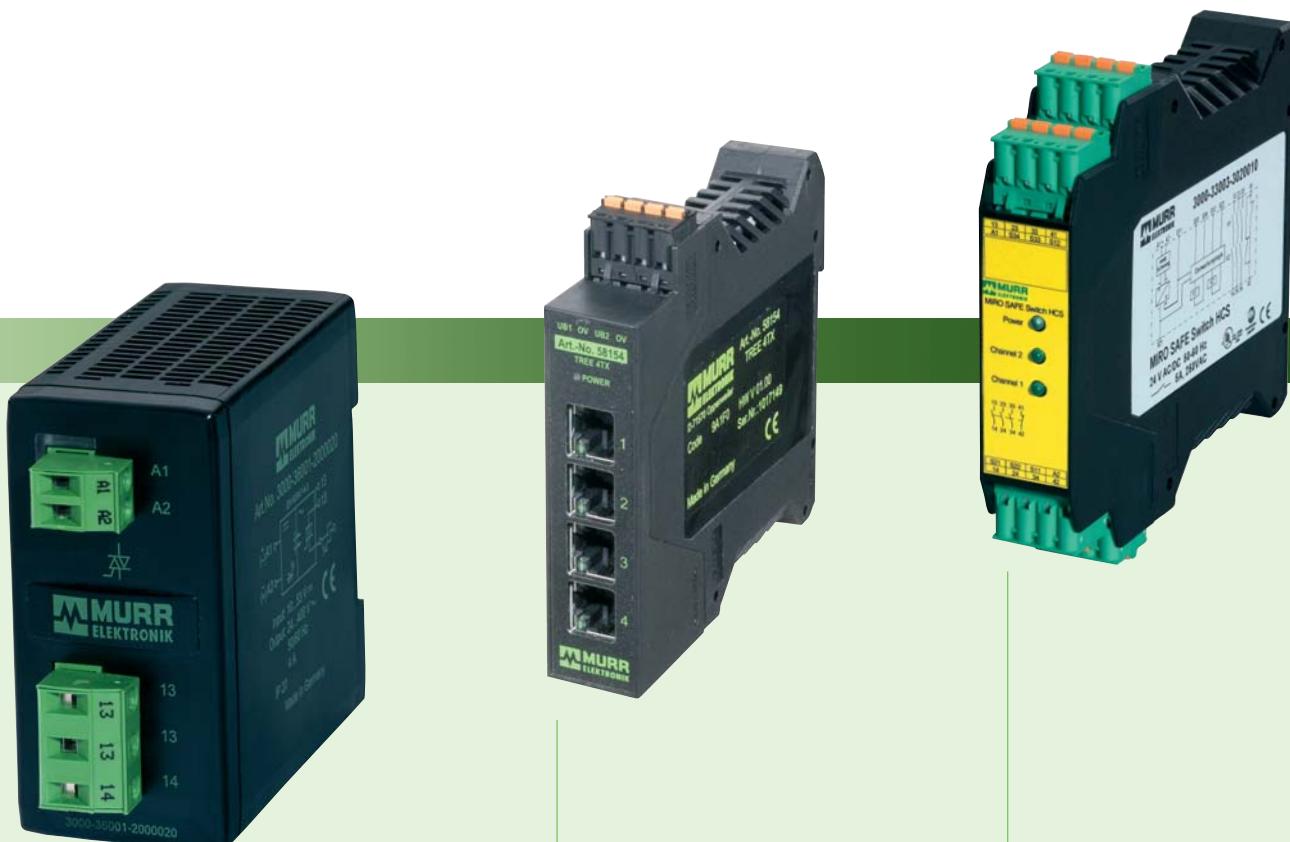

- ➔ Single and multiple channels
- ➔ Potential bridging link
- ➔ Input/output relays
- ➔ Control 5...230 V AC/DC
- ➔ Slimline housing design
- ➔ Pluggable version
- ➔ Galvanic separation

OPTO-COUPLER

- ➔ Single and multiple channels
- ➔ Potential bridging link
- ➔ Overload and short circuit protection
- ➔ 0,5...10 A DC
- ➔ Up to 500 kHz switching frequency
- ➔ Slimline housing design
- ➔ Pluggable version
- ➔ Galvanic separation

SOLID STATE RELAYS

- For AC voltage
- Single and multiple phases
- Zero voltage switch
- 0.5...30 A AC
- Pluggable version

ACTIVE INTERFACE MODULES

- Analog converters
- Comparator modules
- Temperature converters
- Pole changing switches
- Motor temperature monitoring
- Timer
- Ethernet Switches

SAFETY RELAYS

- Emergency stop and guard door applications
- Light barrier applications
- Two-hand controls
- Safety mat applications
- Optional automatic start

RELAYS

MIRO 6.2 pluggable

- 6.2 mm slimline, pluggable relays
- Push-in connection technology
- Potential bridging link to input and output
- Sockets and plug modules available separately
- Input/output relays
- CSA-approvals

MIRO 6.2

- 6.2 mm slimline coupling relays
- Potential bridging link to input and output
- H-O-A versions
- Input/output relays
- Different input voltages
- UL-approvals

MIRO 12.4

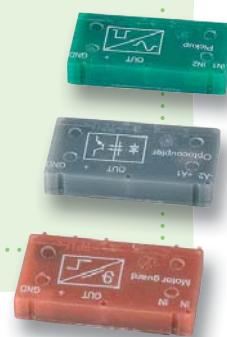

- 12.4 mm slimline, compact coupling relays
- Multi-channel variants
- Input/output relays
- Different input voltages

MIRO 6.2

Did You Know?

The small, pluggable modules of the MIRO 6.2 product line are available as different models. For example:

- Input and output relay
- Optocoupler 3 A
- Optocoupler 4 A with short circuit protection
- Solid state relay 230 V/0,5 A
- Pulse lengthening device 40 ms,
- Pulse divider 10:1
- Motor-Guard

OPTO-COUPLER

MIRO 6.2 pluggable

- 6,2 mm slim, pluggable optocouplers
- 3 A and 4 A optocouplers
- Short circuit protection (4 A)
- Base and pluggable module separately available
- Common bridges at input and output

MIRO 6.2

- 6,2 mm slim optocouplers
- 0.5...10 A
- Potential bridging link
- Up to 500 kHz switching frequency

SPECIAL VERSIONS

- 10 A / 1 KHz power opto-coupler
- Multiple voltage versions

MIRO – compact & functional

MIRO – the coupling module in terminal block format

Coupling modules in the form of relay and opto-coupler modules are indispensable in controller and system construction. Coupling modules are needed for signal amplification, signal adaptation, potential separation, potential-free transfers to other parts of the system and for increasing interference immunity.

Using the MIRO range of modules will cut your costs and block out interference and overvoltage from PLC boards and construction cards. MIRO interface modules will increase the operational reliability of your system and reduce the size of your switch cabinet.

MIRO – a wide range of products in the housing

Regardless of whether they are relays (input and output relays), opto-couplers or intelligent converter modules – all modules are available with the same housing concept.

MIRO – terminal relay – just 6.2 mm wide

1 relay, 1 C/O contact with bridging link just 6.2 mm wide. The modules are suitable for clipping onto a 35 mm DIN-rail in accordance with EN 60175. The screw terminal or spring clamp terminal connection (Cage Clamp[®]) leaves nothing to be desired.

MIRO – easy access

The terminals are arranged in such a way that the connecting terminals are easy to access, even with high-level cable ducts.

MIRO – pluggable

If your application requires frequent switch element replacements, the MIRO 6.2 series is the answer. The relay or opto-coupler can be replaced.

SOLID STATE RELAYS

MIRO 6.2 triac

- 6.2 mm wide housing
- Potential bridging link
- Pluggable version available
- With zero voltage switching
- Different input voltages
- 0.5...2 A

MIRO triac

- Single-phase
- 5...10 A
- With zero voltage switching
- Switching voltage up to 400 V AC
- Different input voltages

MIRO triac

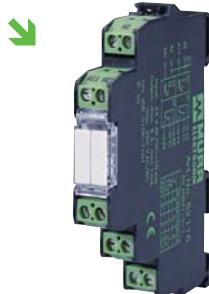

- Single-phase, 2-phase and 3-phase
- 20...30 A
- With zero voltage switching
- Switching voltage up to 660 V AC

INFORMATION

AC voltages can be switched without causing wear using **triacs or thyristors as semiconductor switches**. Solid state power switches are often a substitute for contactors in cases where frequent switching occurs. Zero voltage switches minimize the in-rush current and reduce the number of switching torque faults.

Example applications are: plastic processing, rubber processing, building heating, industrial furnace construction, the automotive industry and the food and drink industry.

ACTIVE INTERFACE TECHNOLOGY

MIRO analog modules

- U/U, U/I, I/I and I/U converters
- Comparator modules
- Temperature converters for PT100
- Potentiometer modules
- Pole-changing switches for DC motors

MIRO 6.2 Timer

- Relay output and opto-coupler output
- Multifunctional modules
- Galvanic separation
- Adjustment per potentiometer and DIP-switch

TREE plug module

- Input/output relays
- Opto-coupler 2 A
- Opto-coupler 4 A with current limiting
- Solid state relays 230 V/0.5 A
- Impulse expansion module

INFORMATION

In measuring and control technology, many measuring signals occur that are needed for **monitoring and indicating** the status of mechanical processes.

Before these measuring variables can be used by programmable logical controllers and process computers they must be converted into **digital informationen** or **standardized signals** (0...20 mA, 4...20 mA or 0...10 V).

SAFETY RELAYS

MIRO SAFE SWITCH HCS/HA

Emergency-stop and guard door applications

- TÜV and UL approved for reliability
- Applicable up to safety category 4/PLe
- Minimum space required (22.5 mm) and optimum ease of connection
- With and without monitoring of the start button
- 3 N/O-1 N/C contacts
- 24 VAC/DC and 230 VAC
- Pluggable spring clamp terminals

MIRO SAFE SWITCH BCS/BA

Emergency-stop and guard door applications

- TÜV and UL approved for reliability
- Applicable up to safety category 3/PLd
- Minimum space required (22.5 mm) and optimum ease of connection
- With and without monitoring of the start button
- 2 N/O contact
- 24 V AC/DC and 230 V AC
- Pluggable spring clamp terminal with quick connection technology

MIRO SAFE HAND

Two-handy control

- TÜV and UL approved for reliability
- Applicable up to safety category type IIIC
- Minimum space required (22.5 mm) and optimum ease of connection
- 2 N/O contacts / 1 N/C contact / 1 PLC output
- 24 VAC/DC and 230 VAC
- Pluggable spring clamp terminal with quick connection technology

MIRO SAFE STEP

For safety mat applications

- TÜV and UL approved for reliability
- Applicable up to safety category 3/PLd
- Minimum space required (22.5 mm) and optimum ease of connection
- With automatic start
- 3 N/O-1 N/C contacts
- 24 V AC/DC
- Pluggable spring clamp terminal with quick connection technology

MIRO SAFE T

Emergency-Stop and guard door applications with time delay

- TÜV- and UL approved for reliability
- Applicable up to safety category 4/PLe
- Minimum space required (35 mm) and ease of connection
- 2 N/O / 1 N/C and 2 N/Os delayed
- Time delay 0.05 – 600 s
- Automatic / manual and monitored start-up
- 24 V AC/DC
- Pluggable spring clamp terminal with quick connection technology

MIRO SAFE LIGHT

for light barrier / array applications

- TÜV- and UL approved for reliability
- Applicable up to safety category 4/PLe
- Minimum space required (22,5 mm) and ease of connection
- 3 N/O contacts
- 24 V DC
- Pluggable spring clamp terminal with quick connection technology

SAFETY RELAYS

MIRO SAFE SSO

**Emergency-Stop and guard door applications
(with solid state outputs)**

- TÜV- and UL approved for reliability
- Applicable up to safety category 4/PLe
- Minimum space required (22,5 mm) and ease of connection
- 4 Safe solid state outputs „N/O“ (safety relay outputs)
- Total switching current for all 4 outputs 2.7A/24DC
- Outputs that never wear out, no bouncing, high resistance to shock and vibration
- Pluggable spring clamp terminal with quick connection technology

MIRO SAFE FLEX

**Emergency-Stop/guard door, two-hand operation,
light barriers and pulsing safety switches**

- TÜV approved for reliability
- Applicable up to safety category 4/PLe
- Minimum space required (22,5 mm) and ease of connection
- For flexible use in many applications
- 2 N/O/1 N/C
- 24 V DC
- Pluggable spring clamp terminal with quick connection technology

MIRO SAFE E/EQ

Expansion module for contact multiplication

- TÜV- and UL approved for reliability
- Applicable up to safety category 4/PLe
- Minimum space required (22,5 mm) and ease of connection
- 4 N/O/1 N/C
- With or without cross circuit monitoring
- 24 V AC/DC
- Pluggable spring clamp terminal with quick connection technology

The MIRO modules are equipped with spring clamp terminals that allow quick cable connections. The ferrule ends of the rigid or flexible connectors are directly plugged into the contact without requiring the use of an opening lever. This creates an automatic connection – in line with our plug-and-play concept.

MIRO SAFE – A SAFE PRODUCT!

MIRO SAFE – Proven relay technology for maximum safety

MIRO SAFE relays are an important component of a consistent safety chain. MIRO SAFE safety relays can be used for emergency stop and guard-door monitoring, two-hand controls, and for safety mat and light barrier applications.

With the safety-related application of MIRO SAFE, designed for the protection of workers and machines, you reduce downtime and outages

MIRO SAFE – Maximum safety

MIRO SAFE safety relays are applicable up to the maximum safety category 4 (EN 954-1). All MIRO SAFE safety relays are TÜV and UL approved.

MIRO SAFE – Proven relay technology

MIRO SAFE safety relays are based on proven relay technology. Thus no conversion to new, complex technologies is required and existing knowledge can be used during start-up, operation and in case of maintenance.

MIRO SAFE – Safe and installation friendly

Pluggable spring clamp terminals or double spring clamp terminals allow simple and quick installation and start-up. Application friendly circuit diagrams attached to the MIRO SAFE relays help reduce the risk of mis-wiring. MIRO SAFE stands for easy connectivity with maximum functionality and a slim design of 22.5 mm.

MIRO SAFE – Safe and cost-efficient

From an economic point of view, the application of proven relay technology on a high level shows positive results. Thanks to the preventive functioning of MIRO SAFE, fatal danger for workers and machines are detected immediately and can be avoided. MIRO SAFE eliminates negative effects. Using MIRO SAFE shortens downtime and production outages, thus reducing your costs and increasing efficiency.

Description

The DC- or AC-voltage comparator for analog voltage, which, i. e. will generate from pressure, temperature, or other sensors. The analog input values are compared to internal or external reference voltages to over or underflow.

The potentiometer converter is be used to convert resistive load into a voltage signal. A higher linearity will be achieved due a lower loop stream. The sensor cables are monitored for line breaks and short-circuits.

ACTIVE INTERFACE TECHNOLOGY

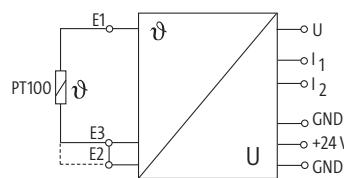

Temperature converters for PT100 sensors

MTW 12,4

2-/3-wire

INPUT	spring clamp/screw terminals	
-50 ...+50 °C		6644330
-50 ...+150 °C		6644331
0 ...100 °C		6644332
0 ...200 °C		6644334
0 ...600 °C		6644336

Technical data

Supply voltage	24 V DC	
Cable resistance (without PT100)	at 3-wire technology max. 100 Ohm	
Output signals	at 0...10 V DC at 4...20 mA	max. 25 mA, overload protected max. 500 Ohm R _L
Tolerance	± 1 % from end value	

Motor protection relays
